JAVA FUNCTIONS SNACKS – TGIF

Instructions:

1. **Avoid using Artificial Intelligence(AI) tools.**
2. **Submission time (8:30am – Monday).**
3. **All questions is to be in a single file. This file is to be titled Kata**

Submission Guideline: Inside the JAVA folder add this file.

Push to git.

1. **Write a method** that **returns** the **maximum** of two numbers.
2. **isEven(integer) → boolean:** Write a function that takes an integer and returns true if the integer is even and returns false if the integer is odd.
3. **isPrimeNumber(integer) → boolean :** Write a function that takes an integer and returns true if the number is a prime number and returns false if it is not a prime number.
4. **subtract(integer, integer) → integer :** Write a function that takes 2 integers and returns the positive difference irrespective of the parameter order. **Example: 3, 7 and 7, 3 should return 4.**
5. **divide(integer, integer) → float :** Write a function that takes 2 integers and returns the quotient. If the second integer is 0, return 0.
6. **factorOf(integer) → integer :** Write a function that takes an integer and returns the number of factors for the integer. **Example: Input 10 → Output 4 (factors: 1, 2, 5, 10).**
7. **isPerfectSquare(integer) → boolean :** Write a function that takes an integer and returns true if the integer is a perfect square. **Example: Input 25 → true.**
8. **isPalindrome(integer) → boolean :** Write a function that takes a 5-digit integer and returns true if it is a palindrome. **Example: 54145 → true.**
9. **factorialOf(integer) → long :** Write a function that takes an integer and returns the factorial of the number. **Example: Input 5 → Output 120 (5 × 4 × 3 × 2 × 1).**
10. **squareOf(integer) → long :** Write a function that takes an integer and returns the square of the number. **Example: Input 5 → Output 25.**

Have fun guys
